

DAY 19 POWER BI PRACTICE

BLINKIT SALES ANALYSIS

◆ Overview

The **Blinkit Sales Dashboard** provides an analytical view of sales performance, item distribution, outlet performance, and customer ratings across various store types. It helps in understanding **sales trends**, **outlet efficiency**, and **customer satisfaction** using key performance indicators (KPIs) and visual insights.

Objectives

- To analyze **total sales** across different outlets.
- To compare **item types**, **fat content**, and **outlet sizes**.
- To study the relationship between **average rating**, **number of items**, and **outlet performance**.
- To visualize **sales growth by year** and **location category**.

Metric	Value	Description
Total Sales	1.20M	Overall sales generated by all outlets
Average Sales	141	Average sales per item/outlet
Number of Items	8523	Total items sold

Metric	Value	Description
Average Rating	3.92	Overall customer satisfaction score

 Visual Insights

1. Sales Trend by Year (Outlet Establishment)

- Displays outlet establishment trends from **2012–2022**.
- Peak establishment observed around **2018** ($\approx$ 205K).
- Growth stabilizes after 2020.

2. Outlet Size Distribution

- **High:** 507.9K
- **Medium:** 444.7K
- **Small:** 248.9K
- ➔ Larger outlets contribute the highest to total sales.

3. Outlet Location Performance

- **Tier 3:** 472.13K (Highest)
- **Tier 2:** 393.15K
- **Tier 1:** 336.40K
- ➔ Tier 3 outlets dominate sales, indicating better regional demand.

4. Item Type Analysis

- Top-performing categories:
 - Fruits & Vegetables (0.18M)
 - Snack Foods (0.18M)
 - Household Items (0.14M)
- Lower-performing categories: Breakfast, Starchy Foods, Hard Drinks.

5. Fat Content Distribution

- **Regular:** 776.32K
- **Low Fat:** 425.36K
- ➔ Regular products generate higher sales volume.

Insights

- **Supermarket Type1** contributes the most to total sales.
- **Tier 3 regions** have the highest sales share.
- Customers prefer **regular-fat products** slightly more than low-fat ones.

- **Average rating remains stable (~3.9)** across outlets, showing consistent satisfaction.
