

# POWER PROJECT 1

## SALES DASHBOARD

### OUTLINE OF THE POWER BI DASHBOARD:

Outline of the dashboard is one of the effective way in which you can design your dashboard by keeping in mind of the position of graphs , filters, slicers, Kpi keys , data modelling ,Dax functions

A professional Power BI dashboard is built on three layers: the **Foundation**, the **Logic**, and the **Visual Interface**.

#### Layer 1: The Foundational Outline (Data modelling & Quality)

Before placing a single visual, the data structure must be sound. This is where **Data modelling** and **DAX** are critical

#### Layer 2: The Logical Outline (Visual Hierarchy & Flow)

The layout must guide the user from a high-level overview to specific details, answering the most important business questions first.

#### Layer 3: The Visual and User Experience (UX) Outline

This layer focuses on the aesthetic and interactive elements that make the dashboard easy to use and understand.

## POWER BI VISUALIZATION

## Sales Dashboard Report

This dashboard was designed to provide a **comprehensive, visual, and interactive representation** of the company's sales performance. It combines key performance indicators (KPIs), monthly trends, regional and employee insights, and detailed data breakdowns to support better business decision-making.

### Purpose of the Dashboard

The goal of this dashboard is to:

- Monitor overall sales and customer metrics.
- Identify trends and patterns in monthly performance.
- Analyze profit contribution by country.
- Track sales and profit distribution by order status.
- Evaluate employee-wise sales contributions over the years.
- Provide a detailed view of shipping and order data.

### KPI Section

At the top of the dashboard, three key metrics are highlighted:

- **Total Sales (10.68M):** Reflects the gross sales generated.
- **Total Customers (326):** Shows how many unique customers have made purchases.
- **Quantity Ordered (106K):** Indicates the total units sold.

These KPIs give an instant overview of the company's scale of operations and performance.

### Sales and Profit Trends (Monthly)

A dual-axis line and bar chart presents the **monthly sum of sales and profit**.

- The **bar chart** represents total sales each month.
- The **line graph** overlays profit trends.

### Insight:

Sales peaked in **November**, possibly due to seasonal demand or promotions. Profit margins remained relatively stable with minor fluctuations.

This helps in recognizing which months are most profitable and planning inventory or marketing activities accordingly.

### Profit by Country

A horizontal bar chart breaks down profit by top countries:

- **USA** and **France** are the leading contributors.
- Followed by **UK**, **Australia**, and **Japan**.

### **Insight:**

Focusing marketing efforts or expanding operations in high-performing regions may drive further growth.

### **Conclusion**

This dashboard enables better decision-making through:

- Real-time performance tracking.
- Identification of high-value customers, employees, and regions.
- Analysis of order processing efficiency.
- Planning for seasonal trends and market behavior.

With a clear design and interactive components, this dashboard simplifies complex sales data into actionable business insights.
